Founded in 1971, with an international editorial board of 36 scientists, *Water, Air, and Soil Pollution* is an interdisciplinary journal for all the physical and biological processes affecting our flora, air, water, and solid earth in relation to environmental pollution. Because of its wide scope, the topics are diverse and include all aspects of sources, transport, deposition, accumulation, disposition, and mitigation of acid precipitation, atmospheric pollution, heavy metals, water pollution, waste water, wastes, pesticides, soil pollution, sewage sediments, etc.; effects of pollutants on human beings, vegetation, fish, aquatic species, microorganisms, animals, etc.; ecological implications of pollution; and pollution models.
